The screenshot shows a Windows Command Prompt window titled "Command Prompt". The window has a dark background and a light-colored text. The title bar includes a close button (X), a maximize button (square), and a minimize button (dash). The command prompt shows the following text:

```
C:\Users\koppu\OneDrive\Desktop\Sem 1\Python>py prg7.py
Enter your age:18
Your age after 5 years is: 23

C:\Users\koppu\OneDrive\Desktop\Sem 1\Python>|
```

#Take the length and width of a rectangle as input and calculate its area

```
length=int(input("Enter the length of Rectangle:"))
```

```
width=int(input("Enter the width of Rectangle:"))
```

```
area=length*width
```

```
print("The Area of your rectangle is:",area)
```

The screenshot shows a Windows Command Prompt window titled "Command Prompt". The window has a dark background and a light-colored text. The text inside the window shows the execution of a Python program. The prompt is "C:\Users\koppu\OneDrive\Desktop\Sem 1\Python>py prg8.py". The program prompts the user to "Enter the length of Rectangle:" and the user enters "5". The program then prompts the user to "Enter the width of Rectangle:" and the user enters "6". Finally, the program outputs "The Area of your rectangle is: 30". The prompt is then "C:\Users\koppu\OneDrive\Desktop\Sem 1\Python>".

```
Command Prompt
C:\Users\koppu\OneDrive\Desktop\Sem 1\Python>py prg8.py
Enter the length of Rectangle:5
Enter the width of Rectangle:6
The Area of your rectangle is: 30
C:\Users\koppu\OneDrive\Desktop\Sem 1\Python>
```

#Take the price of an item and quantity as input. Calculate and print the total cost

```
price=int(input("Enter the price of item you want to buy:"))
```

```
quan=int(input("Enter the quantity of item you want to buy:"))
```

```
cost=price*quan
```

```
print("Your total bill is:",cost)
```

The screenshot shows a Windows Command Prompt window titled "Command Prompt". The window has a dark background and a light-colored text. The text inside the window shows the execution of a Python program. The prompt is at the C:\Users\koppu\OneDrive\Desktop\Sem 1\Python directory. The user has run the command "py prg9.py". The program prompts the user to enter the price of an item, which is 155, and the quantity of the item, which is 3. The program then calculates the total bill, which is 465, and prints it out.

```
Command Prompt
C:\Users\koppu\OneDrive\Desktop\Sem 1\Python>py prg9.py
Enter the price of item you want to buy:155
Enter the quantity of item you want to buy:3
Your total bill is: 465

C:\Users\koppu\OneDrive\Desktop\Sem 1\Python>|
